## **REACH Regulation and Substances of Very High Concern**

Dear Customer,

We hereby inform you that SKF has a policy, process and dedicated resources in order to comply with REACH, the Regulation Concerning Registration, Evaluation, Authorization and Restriction of Chemicals.

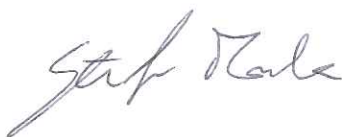

SKF continuously works to ensure that our units and their suppliers are compliant. To support this SKF has dedicated resources with expertise that provides proactive advice and training to key personnel within SKF.

Demands for pre-registration and registration have been communicated to suppliers, and to the best of our knowledge all relevant substances in SKF products have been registered.

Part of the SKF Sustainability Strategy is to closely follow the development of the REACH regulation, including additions to the candidate list of substances of very high concern (SVHC) and the inclusions to Annex XIV, along with the associated authorization process for relevant substances. Moreover SKF are continuously monitoring new restrictions included in Annex XVII.

If you have any further question regarding REACH implementation at SKF, kindly contact your SKF sales contact person.

Yours truly

Stefano Marzola  
SKF Product Material Compliance Manager
